

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Application No. :

U.S. National Serial No. :

Filed :

PCT International Application No. : PCT/DE2004/001368

VERIFICATION OF A TRANSLATION

I, the below named translator, hereby declare that:

My name and post office address are as stated below;

That I am knowledgeable in the German language in which the below identified international application was filed, and that, to the best of my knowledge and belief, the English translation of the amended sheet of the international application No. PCT/DE2004/001368 is a true and complete translation of the amended sheet of the above identified international application as filed.

I hereby declare that all the statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the patent application issued thereon.

Date: January 16, 2006

Full name of the translator :

Clive Edward MANN

For and on behalf of RWS Group Ltd

Post Office Address :

Europa House, Marsham Way,
Gerrards Cross, Buckinghamshire,
England.

Claims:

1. A child seat for mounting on a vehicle seat (10) having a seat surface (16) which is inclined forward and upward in the direction of travel (18), the child seat (28) having a base part and a seat shell arranged on the base part, the base part (30) having a base area (34, 36) with a front base area section (34) and with a rear base area section (36), which base area sections enclose an obtuse angle (38) with each other, and a wedge element (40) bearing either against the front or the rear base area section (34 or 36), the wedge element (40) and the front and rear base area sections (34 and 36), which are matched to one another, being designed in such a manner that the wedge element (40) and the respective base area section (34 or 36) adjoining the wedge element (40) form a common level bearing surface (42), characterized in that the wedge element (40) can be displaced on the base part (30) along a guide.
2. The child seat as claimed in claim 1, characterized in that the wedge element (40) has at least one hollow space (52) which is accessible from the outside and forms a storage space.
3. The child seat as claimed in claim 2, characterized in that the hollow space (53) can be closed.
4. The child seat as claimed in one of the preceding claims, characterized in that the seat shell (32) can be displaced to and fro on the base part (30) between different positions.
